CHAPS payments	32.2 mn	0.8%	CHAPS payments	£61,588 bn	-4.7%

3 The Faster Payments Service was launched on 27 May 2008.

A Spending in the UK on debit and credit cards

Strong spending in January was the main contributor to the growth of 2.1 % in total plastic card spending between 2010 Q4 and 2011 Q1 - spending subsequently slowed down in February and March. This strength in spending in January may be attributable to a combination of seasonal sales and a rush to purchase big - ticket items early in the month to take advantage of the delayed implementation of the VAT rise by some major retailers. Debit card spending in 2011 Q1 was up by 2.7% while credit card spending rose by 0.7% (following falls in the preceding three quarters). The annual rate of growth for all plastic card spending accelerated to grow at 7.6% (compared with 7.1% during 2010 Q4), mainly driven by increased spending on debit cards which showed an annual growth rate of 10.1% (compared to 9.2% in 2010 Q4); in contrast the annual growth rate in credit card spending slowed to 1.5% (compared to 2.2% in 2010 Q4).

In spite of rising inflation through the quarter, average plastic card transaction values fell by £0.52 to £48.11 between 2011 Q1 and 2010 Q4 - the average transaction values (ATV) credit and debit cards each fell by approximately £0.44. This decrease in ATVs was an indication of lower spending patterns by consumers in February and March - a reflection of the uncertain economic environment.

Plastic card purchases accounted for 66.9% of all purchases in the retail sector slightly down compared to 2010 Q4 when the proportion was 67.2%. In 2010 Q1 plastic cards accounted for 65.1% of all retail purchases.

Chart A2

Chart A3

Notes

Section A shows spending in the UK on plastic cards as reported to The UK Cards Association by the banks that process card purchases on behalf of UK merchants, retailers and other service providers. The data include a small proportion of spending using non-UK-issued cards, e.g. by tourists, but exclude spending abroad on UK-issued cards. Cash withdrawals from ATMs are not included.

Seasonal adjustment is the process of estimating and removing seasonal effects from a time series in order to more accurately compare consecutive months.

B Credit card lending and repayments

Gross lending on credit cards, including interest and other charges, amounted to £31.9 billion in 2011 Q1. Repayments amounted to £31.5 billion, representing 98.6% of gross lending during the quarter. Over the 12 months to March 2011 gross credit card lending grew by 6.2%; over the same period repayments increased by 6.9%. This faster growth in repayments slightly improves the annual average ratio of repayments to gross lending (see Chart B1) for 2011 Q1 by 4 basis points to 98.9%.

Outstanding balances increased slightly during the quarter to £58.2 billion. Outstanding credit card lending accounted for 4.0% of total lending to individuals, a similar percentage to that seen at the end of December 2010.

Seasonally adjusted		Gross lending	Repayments		Outstanding balances	Average credit card APR
		£ mn	£ mn	%	Source Bank of England £ mn	Source Bank of England %
2005		131,415	125,297	95.3%	68,763	16.0

	Mar	10,555	10,405	98.6%	58,152	16.7

Chart B1

Chart B1 shows the rolling 12-month average of repayments

Section B shows data relating to UK households' credit and charge card use. Gross lending equates to new spending on credit and charge cards, including interest and other charges, whilst outstanding balances is the total amount still owed at the end of the period. Data on gross lending and repayments are provided by members of The UK Cards Association which accounted for over 98% of gross credit card lending during the 12 months to March 2011.

Outstanding balances are reported to the Bank of England by all UK credit card issuers. The figures shown here up to end-2009 include estimated amounts that have been securitised, ie, transferred by UK credit card issuers to non-resident associated companies. These estimates are based on the published footnotes to the Bank of England's data series LPMVZRJ. From January 2010 these securitisations have been included within the data published by the Bank that are reproduced above.

The average interest rate (Bank of England data series IUMCCTL) is expressed in terms of Annual Percentage Rate of Charge (APR) and applies to credit card purchases rather than other transaction types. The series is weighted according to each credit card issuer's monthly gross credit card lending.

C Cash machines

There was a rise in the total number of ATMs deployed during 2011 Q1. The number of free-to-use machines increased by 196 to reach 41,646, accounting for 66% of the total whilst the number of pay-to-use machines increased by 81 to 21,768.

There were 667 million withdrawals during 2011 Q1 totalling £43.6 billion; 97% of these withdrawals were from ATMs that are free-to-use.

Note. Following a review of data collection methods undertaken jointly by LINK and UK Payments there have been a number of revisions to the data from 2007 onwards.

	Number of cash machines at period end	Cash withdrawals						Number of withdrawals where a fee is charged to the cardholder %
		Volume		Value

Chart C1

Chart C2

Section C shows key statistics on UK cash machines, indicating the total number of machines installed at the end of each period, the total number and value of withdrawals processed during the period, and shows the average value of a withdrawal (rounded).

D Bacs Direct Credits and Direct Debits

The first quarter of a year typically sees the lowest number of Bacs payments and 2011 was no exception with 1,367 million payments, lower than the 1,486 million seen in the final quarter of 2010 but almost identical to the number recorded in 2010 Q1. The annual rate of growth fell back to only 0.5%. On the other hand, the total value of all payments is growing more strongly with an annual rate of increase of 6.9%. During 2011 Q1 a total of £1,062 billion was processed, more than in the preceding quarter and 9.5% more than in 2010 Q1. Over the past 12 months the average value of a Bacs payment has risen from £710 to £854.

Although fewer Direct Debits were processed in 2011 Q1 than in the preceding quarter, numbers are continuing to grow on an annual basis by 3.1%. Growth is stronger in value terms at 9.2% with the total for 2011 Q1 reaching £244 billion compared with £218 billion in the first quarter of 2010. The average value of a Direct Debit has risen over the past year from £287 to £320. The number of standing orders continued to fall with 32 million processed in 2011 Q1 compared with 43 million in the first quarter of 2010, revealing an annual rate of decline of 26%.

Notes

1 Per cent growth figures relate to 12 month periods.

2 Data are not available for standing order values; these are included within Bacs Direct Credit values.

E Cleared cheques and paper credits

Cheque volumes and values continued their double-digit decline in the first quarter of 2011 with volumes down by 11.6% and values by 12.7%. The average number of cheques cleared per month fell to 60 million compared with 84 million per month in 2008 and 110 million per month in 2005. The average value of a cheque fell to £936 over the six months to end-March 2011. This average was close to or over £1,000 for much of the previous four years and this recent fall suggests that higher value settlements have been adopting other payment methods.

Credit clearing volumes and values also continued to fall in 2011 Q1, with volumes declining at an annual rate of 16% and values by 18%. There were 14.4 million payments with a total value of £7.9 billion.

Chart E1

The data for Chart E1 are available only on an annual basis.

¹ Excludes euro cheques & US dollar cheques, which are processed by C&CCC through separate systems

² Per cent growth figures relate to 12 month periods.

F Same-day payments

Following the small return to growth during the final quarter of 2010 the number of same day CHAPS payments continued to increase during 2011 Q1, with growth of 2.6%. There were 8.1 million payments with a total value of £15.8 trillion.

Faster Payments continued to grow strongly with annual rates of growth of 39% for volumes and 47% for total values. [Note that the data table below shows the annual growth rates from 2011.] In the first quarter of 2011 there were 122 million Faster Payments amounting to £48 billion. The average value of a Faster Payment reached £394 in the first quarter of 2011 compared with £375 a year earlier.

Growth in the penetration of Faster Payments into the fields of standing orders, online and telephone banking payments that had begun to slow in the second half of 2010 fell to zero in the first quarter of 2011 with Faster Payments accounting for 64% of standing orders and 82% of online and telephone banking payments, the same percentages as during 2010 Q4.

Chart F1

Chart F2

Notes

- 1 Per cent growth figures for CHAPS payments relate to 12 month periods. For Faster Payments, per cent growth is based on consecutive three month periods up to December 2010. From 2011 annual rates of growth are shown.
- 2 Standing orders includes a small volume and value of returned payments.
- 3 Prior to June 2008 data for CHAPS volumes and values included CHAPS Euro, which ceased operations on 16 May 2008. Details of the amounts of CHAPS Euro volumes and values may be found in earlier Statistical Releases (contact press@ukpayments.org.uk). Percentage growth figures from Q1 2008 relate only to CHAPS Sterling.
- 4 Faster Payments began operations on 27 May 2008; the CHAPS Clearing Company has responsibility for the management of the service.
